

## Updates notes for updating SFS 1.7x to 2.27

make sure to backup all of your files and your database before updating/replacing  
AND don't forget to save at least the \$config->secretKey

to get more information what the changes are please use something like WinMerge <http://winmerge.org> to compare your existing version with the new Version - so you could update "modified by you" files easier.

Because of the nature of the update (Bootstrap Version upgrade 2.3.2 to 3.3.6) there is no way to provide a "just replace these files, add these files" step by step guide to update your existing SFS installation - because almost all files are affected.

### 1. upload new files

backup old ones into another directory.

Rename or delete setup.php, you already have a running SFS1.7x installation, right?

If you like a fresh installation, you should go on with the readme.pdf and stop following these steps, **AND** please use new/another \$config->tablePrefix

### 2. modify config.php

to fit your needs.

There are some changes to the SFS1.x version but you will see the similarities. More information about the settings and new features of SFS 2.x can be find in the readme.pdf

### 3. update database

upload and run **update\_1.7x\_to\_2.27.php**

### 4. enjoy SFS 2.27

update should be done :)

more information about the config can be found in the readme.
